I'm with my friend and Project Manager, the awesome Steve Dinardo. This is our airplane for this year's Oceans Melting Greenland survey. It's a C-130 operated by NASA. The red dots show mid-flight temperature and salinity measurements. The yellow ones remain to be done. The total so far is 205 probes dropped. Tomorrow, we will head out again to collect data in Scoresby Sound, the huge system of fjords in the western part of Greenland. We've spent the last couple of days waiting out a weather system and refueling. Fingers crossed for better luck tomorrow...
